

Feel the freedom, touch away the itch...

Tips to stay lice free:

"Lice Survival and Environmental Management:
Ensuring a Lice-Free Home"

Head lice are incapable of surviving beyond 24 hours without human contact, and due to their specialized claws, they are ill-equipped to navigate on any surface other than human hair. Therefore, an exhaustive cleaning of your residence following a lice treatment is not required.

Nevertheless, we advocate for certain preventive measures to solidify your home's defense against re-infestation:

Bedding and Clothing:

- Launder all bedding and clothing that the affected person used in the past 48 hours as you normally would.
- For fragile items like plush toys, either use a dryer on high heat for at least 45 minutes or seal them in a plastic bag for 48 hours.

Carpets, Rugs, and Furniture:

- Vacuum these thoroughly, particularly in areas where the person with lice has spent time in the preceding day.
- Alternatively, cover your furniture with a sheet or protective layer for a day as a precaution.

Hairbrushes and Personal Items:

- Remove all hair from brushes to prevent lice, which can cling to detached hairs, from finding a new host.
- Clean these items in hot, soapy water or seal them in a plastic bag and place them in the freezer for 48 hours.

Hairstyling Practices:

- To reduce the likelihood of lice transmission, tie long hair in a ponytail, braid, or bun.
- Regularly using a mint-based preventive spray can also deter lice.

Community Awareness:

- Informing close contacts to check and treat for lice is vital in preventing spread and re-infestation, especially since only half of those with lice exhibit symptoms like itching.

Our Service Guarantee:

- We offer a full, 30-day lice-free guarantee to showcase our confidence in our treatment efficacy.
- This guarantee requires that all household members must be screened and, if needed, treated for lice, with a follow-up inspection within 7-10 days post-treatment.
- Adherence to our recommended combing protocol post-treatment is also advised to ensure the best outcome.
